*Transforming Classroom Learning
using New Technologies:*

A Blended Learning Case Study at
Schulich School of Business

Jean Adams & Ron McClean
March 10, 2010

Agenda

- A brief history of technological innovation at Schulich ...
- Blended Learning Case: Using new technologies to transform teaching and learning ...
- Discussion, implications and questions ...

Ron McClean

Jean Adams

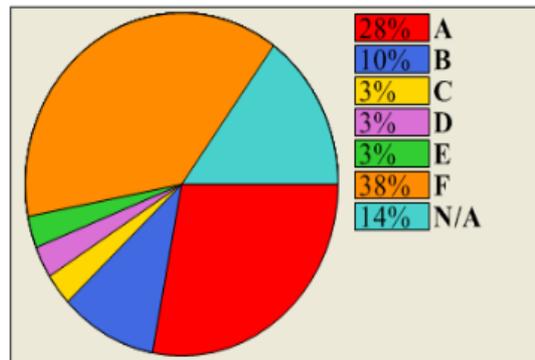

*Please hold your questions to the end.
Chances are we will answer many of them as the session continues.*

Before we begin, a few
questions...

How long have *you* been teaching?

- A. I have never taught
- B. Less than 3 years
- C. Between 3 to 5 years
- D. Between 5 to 10 years
- E. Between 10 to 15 years
- F. More than 15 years

Answers:

A-F

Launch Poll

*“The blackboard revolutionized
education.”*

Source: http://www.ergoindemand.com/about_chalkboards.htm

When were chalkboards first used for instruction? James Pillans, Headmaster of the Old High School of Edinburgh, Scotland, is widely credited for inventing the blackboard and colored chalk which he used to teach geography.

Mr. George Baron, an instructor at West Point Military Academy, is considered to be the first American instructor to incorporate the use of a large black chalk board into the presentation of his math lessons in 1801. However, it's probable that a few other schools had access to it, also.

Thanks to such "out of the box" thinking on the part of a few instructors, the benefits of chalk and blackboards became clearly apparent.

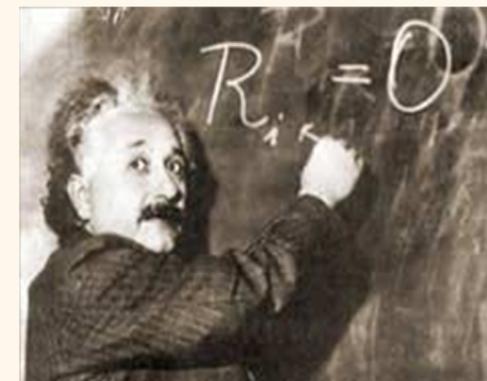

Schoolhouses across America that could afford the slate material adopted the medium because it saved teachers re-writing and allowed them to educate larger numbers of students easily. Large-size slabs of slate boards were ordered and shipped across America via the ever-expanding railroad systems.

Even single-room schoolhouses in far rural areas of the country began enjoying the use of this innovative teaching tool. By the mid-1800s, a blackboard was to be found in almost every school and had become the single most important educational tool. Chalk boards remained the primary all-around educational fixture in schoolrooms and businesses for almost 200 years. Even the corkboard wasn't invented for presentations until 1891.

These boards became equally important in business offices. Blackboards soon became equally important in business organizations, as well as in the fields of math and science, long before the materials were even invented from which whiteboards could be manufactured. Thanks to the chalk board, not only were large amounts of people in the same room able to be presented with the same material all at once, but these boards also became a method of working out long strings of problems and "brain storming" new concepts among several people at once.

Some people, like the famous fellow at right, were known to do some of their best work on black boards!

Albert Einstein

A Brief History of Technological Innovation at Schulich ...

A Brief History ...

- *Blackboards and chalk*
 - Allows “participative” note taking
- *Overhead projectors*
 - Use of acetate rolls
 - Still participative
 - Acetate slides
 - Fixed presentations and annotations
 - Hard to take complete notes
- *SliTex, Harvard Graphics and PowerPoint*
 - Turn lectures into presentations
 - Limited by producing physical slides

A Brief History ...

- *Computer projectors*
 - First ones were for teaching computer programming
 - Projected presentation screens became the dominant form of use
- *Learning Space, Course Material Databases* (1997)
 - Primary use is to distribute slides and readings
 - Slides to be printed before class and annotated for notes
 - Other uses include bulletin boards, discussion spaces, grading and gradebooks
- *Internet Access in classrooms* (Fall, 1999)
- *NewMindSets online content* (Fall, 2000)
 - Presented management education material in ways suited to online reading and interaction
 - Learning “bytes”, pictures.

A Brief History ...

- *New Building* (2003)
 - *Wireless* access in all classrooms
 - Complete presentation systems in all classrooms => *PowerPoint for all !!*
- Fall 2006 – redesigning MGMT 1000
 - *Moodle*
 - Sort of an open source version of CMDs, but with lots of added features, nicely done, fully web-based
 - Used elsewhere in the university
 - *On-line course evaluations*
 - *Clickers* (personal response units)
 - Worked, sort of, for polling in class
 - Adds more student interactivity to class
 - Too intrusive

A Brief History ...

HP Technology for Teaching Research grant Program

- Program has been running for 5 years
- Participants are invited to submit a proposal
 - For example, 44 “Higher Ed” awards were granted to university/colleges throughout the world two years ago (2007)
 - 3 in Canada; Mostly engineering, computer science & science schools; Very few business schools
- **ROUND 1 – Fall 2007:** We competed for, and received, a grant for 2007, based on that proposal.
 - 21 tablet PCs (with extra batteries and cart); Wireless router, printer, digital camera; Cash support for incidentals
- **ROUND 2 – Fall 2008:** We were invited to submit a proposal, based on the success of our first award, for Technology for Teaching Leadership Award
 - Only past T4T award winners could compete
 - Only 10 were awarded in North America, only 1 in Canada – us
 - Brought 42 new tablets

Old Pedagogy: “Bucketfilling”

Definition of a Lecture:

From the notes of the professor

To the notes of the student

Without going through the heads of either

Gareth Morgan (1972)

Distinguished Research Professor

Schulich School of Business

Old “Teaching” Pedagogy

1. Instructor makes notes ahead of class
2. Instructor copies notes to blackboard, perhaps improvising around them
3. Students copy notes into real notebooks, perhaps annotating as they go
 - Powerpoint simplifies steps 1 & 2
 - LMS can simplify part of step 3, but you need to “freeze” the slides, and students need to download them ahead of time, and print them to annotate

Our Challenge: Creating “Collaborative, Interactive Learning” Environments

- Challenge has been to engage the student – make the class more interactive
- In 2006 and 2007:
 - *We pioneered in the use of “clickers”* to enhance classroom interactivity in MGMT 1000, *but found them somewhat intrusive.*
 - We wanted to create learning environments with opportunities for more collaborative groupwork and more interaction between students.

Creating “Collaborative, Interactive Learning” Environments at SSB

- In 2008 and 2009:
 - We trialed DyKnow collaborative software in conjunction with NewMindsets.
 - DyKnow allows:
 - Real-time annotation of slides as they are presented to the students
 - Less intrusive polling – a popup screen on a laptop
 - Group work and sharing of workspace screens
 - (...*Jean will be demonstrating this today* ...)

DyKnow Vision

Foster interaction and engagement in the classroom with DyKnow Vision software

Authoring
Teachers can author class notes within the DyKnow Vision interface using ink or text, as well as leverage content from other sources include the web and Microsoft Power Point.
[View Feature and a Video](#)

Collaborative note taking
Students are no longer "human copy machines" when class content is instantaneously transmitted to their computers. Students can make unique, thoughtful annotations that help them learn during class.
[View Features and Videos](#)

Student/teacher response tools
Polling and chat allow teachers to gauge student understanding during class and adjust instruction on-the-fly. Work submission tools give teachers the ability to securely grade and return work.
[View Features and Videos](#)

Anywhere, anytime access
Both teacher notes and student annotations are saved into a personalized DyKnow notebook, which can be accessed and replayed from any internet-connected computer.

Schedule a *Demo*

Request a **SANDBOX**

Internet 100%

Dyknow Software – *Some features*

- Promotes shared learning sessions
 - Between lecturer and student primarily
 - Slides can be automatically downloaded, and annotated for note taking with tablets and laptops
 - Sessions are stored for each individual on an SQL Server – can be replayed later, from anywhere
 - Has an easy-to-use query feature (replaces “clickers”)
 - Among students
 - Can be used to randomly assign work groups
 - Promotes shared workspaces between work groups

Creating “Collaborative, Interactive Learning” Environments at SSB

New Technology Infrastructure was required:

- Dyknow provoked investment in new technologies (2008)
 - New server with SQL Server running
 - *Beefed up wireless* capacity in McEwan auditorium
 - Went from 1 access point to 3 access points
 - → we generally have 200 simultaneous wireless connections in McEwan (a record!)
 - A “sea” of laptops

... Who is your team
... your BPTP?

Summary: Creating “Collaborative, Interactive Learning” Environments

- We’ve found the most effective *combination of new technologies* for creating a highly collaborative and interactive classrooms is:
 - *HP Tablets* for pen-based annotation
 - *DyKnow collaborative software* that includes polling, grouping and many other features
 - *NewMindsets* online content for supporting individual and collective learning before, during and after class

Blended Learning Case:
Using new technologies to transform
teaching and learning at SSB...

Live demonstration

... just for fun!

I'm creating random virtual teams now.

... Say "hello" to your teammates ...

Some Background:

Managing Contemporary Enterprise

- Introductory core undergraduate course
- Approximately 400 incoming students
- Tuesday classes in McEwan auditorium
- Thursday tutorials (25 students)

Some Challenges / Opportunities:

- 16 to 19 years “young”
- *Different skill levels & expectations*
- *High achievers* - “A” students with entrance scholarships
- *Digital natives!*

Say goodbye to your colleagues

I'm closing the online chat ...

Pedagogical Shift

Our primary teaching aim was to move

FROM

- An instructor-in-control approach

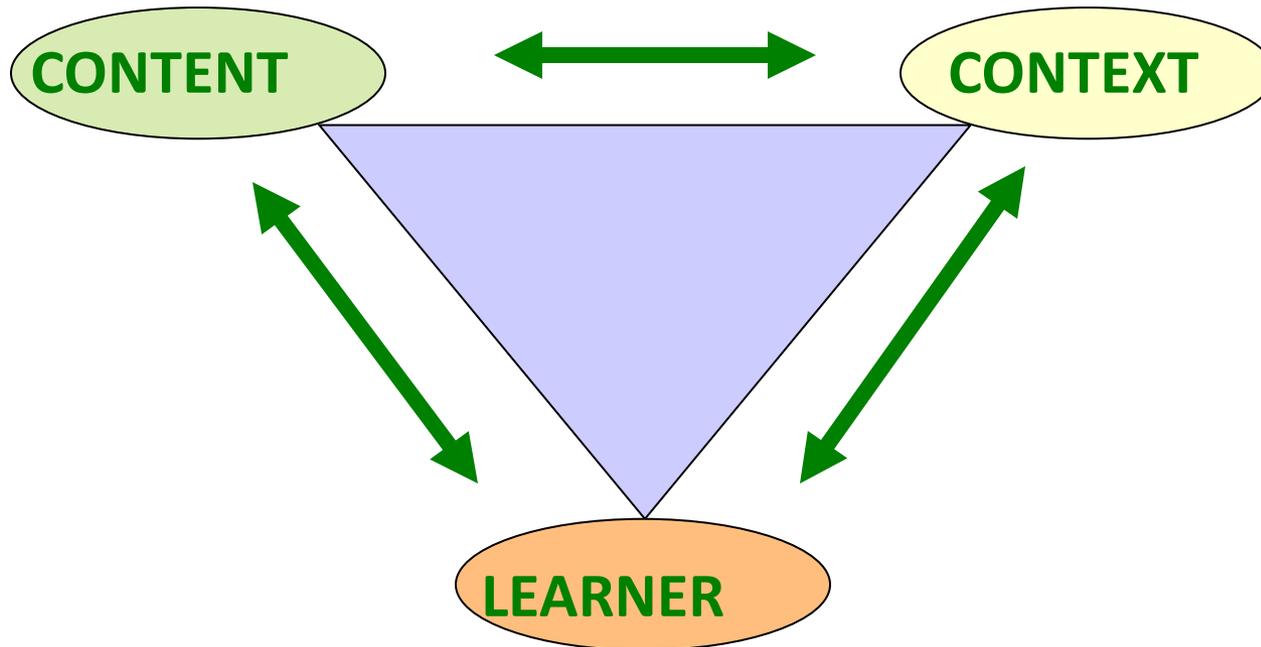

TO ...

- A learner-in-control approach

EMPLOYING

- A “soft-skills learning triangle” methodology

Soft-skills Learning Triangle

(Adams, 2004)

*We have been using various learning technologies to shift to a more learner-controlled pedagogical approach using the **Soft-skills Learning Triangle** as our guiding principle...*

Exercise: Surface And Change Assumptions - Assumptions In Conversation - Windows Internet Explorer

http://bba.nms.schulich.yorku.ca/worldknowledge/surface/surface3.asp

Schulich School of Business York University

New Mindsets

ASSUMPTIONS IN CONVERSATION

Communication between people is heavily based on implicit assumptions.

Two different frames: miscommunication and tension arise

Conversations often get confused, send the wrong messages, or take off in inappropriate directions because people are operating on different assumptions. Consider the following example.

A project manager asks a co-worker, "How are you doing?"

The other person responds, "I'm feeling much better now..."

"Not you," says the project manager. "I mean how is the project coming along?"

"Boy is he insensitive" thinks the co-worker. "All that matters is the job."

"He's so self-centered," thinks the project manager. "He's always just concerned about himself."

Needless to say, relations between the two continue to be tense. If they were more aware of underlying concerns and assumptions, relations could improve.

*Are the changes
making a difference?*

... *Students send me notes like this ...*

“Hi Professor Adams,

I just wanted to thank you for teaching me last semester (MGMT 1000) and to let you know that I had a great experience. *When the course first started I was initially skeptical* since some course concepts seemed very basic and simple, but I now realize that while this is true, people rarely take the time to logically examine these issues and come up with solutions, which this course taught me to do. As well, looking back, it’s amazing how applicable the material covered in management class is in so many different situations. Terms and concepts learned come up in classes ranging from organizational behaviour to accounting.

I also appreciated the technological aspects of the class I really appreciated the usage of *NewMindsets*. As I am prone to be on the computer and online, it was very convenient and even provided motivation to complete the readings since they were so easily accessible. I also really enjoyed the ability to write the midterm on the computer and also the final exam format ... I felt it was very fair and really tested someone’s knowledge.

I really enjoyed the experience of completing the PCDP as well. The project’s concept is ingenious. I treated it as an opportunity for self-development as opposed to just another project and was surprised by how much it helped me view opportunities in my life. ...”

Schulich student selected as a winner of an international essay competition

A first-year Schulich iBBA student was recently selected as one of the worldwide winners of an international essay competition that challenged students to come up with an entrepreneurial solution to a global issue.

Emil Noordeh is one of only 200 students from 50 countries around the world to be selected as a winner of the St. Gallen "Wings of Excellence" Award. Noordeh wrote an essay in which he proposed a solution to the hardships faced by low-skilled workers in developing nations that simultaneously increases corporate profits and reduces the extent of foreign aid required of industrialized nations.

As part of his prize, Noordeh has been invited to attend a three-day symposium from May 15-17 in St. Gallen, Switzerland, along with 600 world leaders and 100 media representatives. Most of his travel and accommodation costs will be covered by the symposium sponsors.

The St. Gallen Symposium, now in its 38th year, bills itself as the "world's leading platform for dialogue on key issues in management, the entrepreneurial environment and the interface between business, politics and civil society." The theme of this year's symposium is "Global Capitalism - Local Values."

New technologies create many new learning opportunities. They can help people catapult themselves into "knowledge work" and develop new capacities for success in a knowledge economy.

"Technology" isn't good ... or bad.

It's how we, as educators, use technologies that is either effective or ineffective.

Thank-you ...
