

Lifelogging

New Communicative Competencies:

Research team members: Heather Lotherington, Natalia Ronda (Canada); Sirpa Leppänen (Finland); Constant Leung (UK); Lars Elleström (Sweden).

Heather Lotherington

Lifelogging as research methodology is new. The lifelogging camera is a wearable device that snaps a picture from the wearer's perspective every 30 seconds. Our international team is testing lifelogging as a keyhole on current communication practices. The educational aim is to crack open the educational insistence that language is grounded on the page in the conventions of print, and in alphabetic encoding. We are collecting data on how we communicate in this day and age on which we can revise our understanding of communicative competence.
